

CodeAlpha Task 1 - Basic E-Commerce Website Project

Project Title

Basic E-Commerce Website

Objective

Build a full-stack e-commerce website using HTML, CSS, JavaScript and Django (Python).

Project Structure

Frontend: index.html, product.html, cart.html, checkout.html, css/style.css, js/script.js. Backend: Django project with Products and Orders apps using SQLite.

Features

Product Listing, Product Details, Shopping Cart, Checkout, Order Processing, Responsive Design.

Technologies

HTML5, CSS3, JavaScript, Django, SQLite.

Database

Products(id,name,description,price,image,stock);
Orders(id,customer_name,email,address,total_price,order_date).

Workflow

Home -> Product Listing -> Product Details -> Add to Cart -> Cart -> Checkout -> Order Success.

GitHub Repository

CodeAlpha_Ecommerce_Website

Conclusion

This project demonstrates the core concepts of a full-stack e-commerce application suitable for CodeAlpha Task 1 submission.
